

Bottom Line:

- GeoTrax Survey™ was used to locate the source of fresh water springs in the Great Artesian Basin (GAB), South Australia
- Blue zones shown above represent the interpreted distribution of upwelling of GAB fluids to the spring mounds
- Green rectangles shown above represent spring dependent surface vegetation
- Yellow circles represent inferred connections to surface based on GeoTrax imaging
- The white line in center of images indicates approximate lower boundary of the Bulldog Shale confining unit and upper boundary of the Cadna-Owie aquifer
