

Frequently Asked Questions (FAQs)

Use of GeoTrax Survey™ on Slurry Wall Project Sites

FAQ: How can Aestus GeoTrax Survey™ technology assist on slurry wall projects?

ANSWER: Aestus can scan a proposed slurry wall alignment to find zones of competent geology that may cause problems during installation. We can also locate slurry walls (post construction) and image zones of slurry loss (during construction). Finally, we can scan a known slurry wall alignment to check for integrity of the slurry wall.
