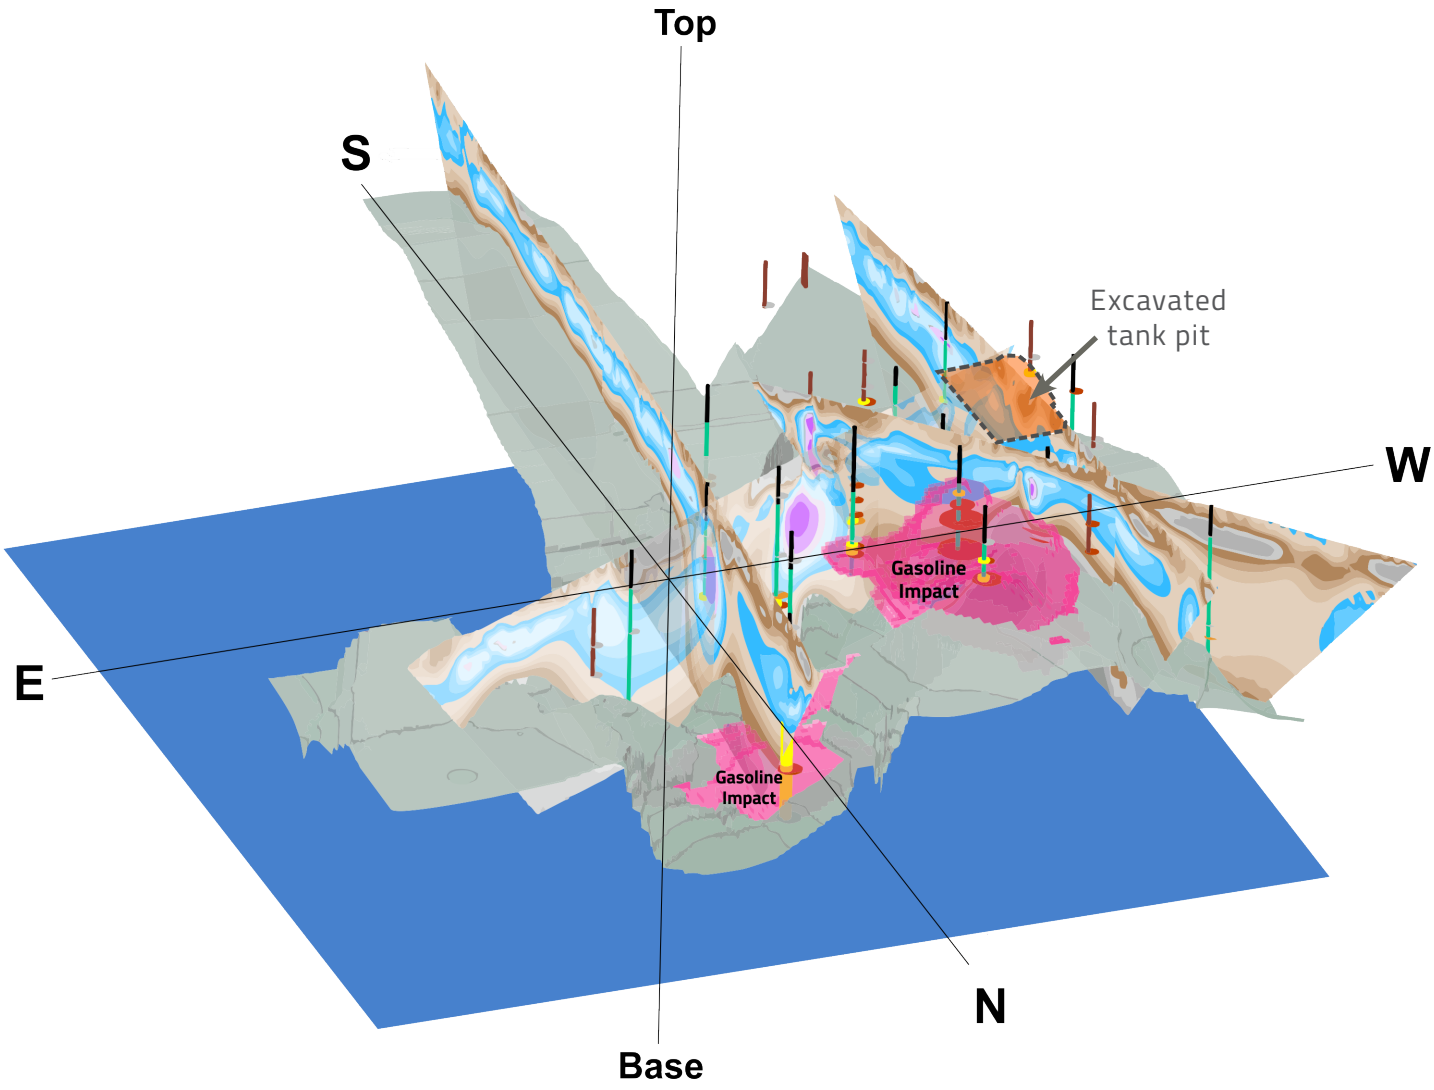
Frequently Asked Questions
3-D Visualization Model?

What do Aestus 3-D models look like, and what data do they include?

Aestus likes to incorporate as many data sets into each 3-D model as possible. The more data that can be viewed together in one place, the better chance there is of seeing trends in the data and developing a better understanding of the site.



3-D Models typically include the following data sets, at a minimum (assuming data is available from client):

- GeoTrax Survey™ locations
- Monitoring well locations
- Interpolated groundwater level surface
- Aerial photo or basemap of the site
- Interpolated bedrock surface
- Groundwater and/or soil analytical data
- Bioparameter indicators
- Utility locations
